

I joined the CA17140 Action “Cancer Nanomedicine - from the Bench to the Bedside” in the worst of the Covid-19 pandemic. It was a difficult time for everybody and I, like many other scientist, was not able to go to the lab. I am committed to the search for new therapeutic strategies for cancer treatment. Every day I thought about the contingencies the pandemic was causing on the treatment of cancer patients, and the anxiety they would feel about it. I had friends diagnosed with cancer that were under treatment at that time. Some of them were young and with children of their own.

As soon as we could we went back to our labs to continue work helping patients leave their disease behind. Since joining Nano2Clinic I can feel how scientists involved in the Action are continuously thinking, exchanging knowledge, information, resources and focusing all their efforts to offer cancer patients better treatment options. And I know that only by working together we will be able to reach this goal.
