

Post-doctoral Position in Signaling Pathway of Resistance to Cancer Treatment

Position: Post-doctoral Position

Deadline: 15 July 2022

Employment Start Date: 1 September 2022

Contract Length: 2 years, with possibility of renewal

City: Albacete

Country: Spain

Institution: University of Castilla-La Mancha

Department: Unidad Asociada Neurodeath; School of Medicine

Description: We are looking for a highly motivated postdoctoral researcher to study the signaling pathways activated during the resistance of tumoral cells to different antitumoral treatments including small drugs and siRNA

Your qualifications: Experience in Cellular and Molecular Biology techniques is required. Previous experience in CRISPR-cas is an added value. Candidates should be fluent in written and spoken English. The ideal candidate should be highly motivated, and able to work independently.

The research will be carried out in the group of Valentín Ceña, at Unidad Asociada Neurodeath; School of Medicine, University of Castilla-La Mancha, Albacete, Spain.

Important: Interested candidates should their CV, along with a motivation letter, and at least two recommendation letters to Prof. Valentín Ceña at valentin.cena@gmail.com

For further details about the project, please contact: valentin.cena@gmail.com
